OLD HICKORY WAGONS

Here are a few reasons why you should buy an Old Hickory Wagon: Rims are riveted each side of spokes. Dust proof thimble skeins and boxes, Gears are heavy strapped and braced. Axles are strapped on instead of bolts going through the axle to weaken it. The Old Hickory is the old stand by wagon.

and vicissitudes which would halt the average man, yet they labor, and the beauty of it all, the one point that makes the visitor feel as if he were in the presence of madrood in the making is the fact that they are obtaining as the fact that they are obtaining to their depth, always advising, never critcising and always at hand to lend aid. As one student finishes an experiment.

son, in first year science, and H. G. Gambee in agriculture, are the men who have been performing the Hercu-lean task of putting the science departnent of that institution on a par with he best in the country. It is amazing to say the least for

the casual visitor to take a trip through this department. It is almost certain this department, it is almost certain that there are very few people in Phocnix who are aware of the deep reaching results being obtained by these men. The freshman student is introduced to science through the medium of a text book, "First Year Science, which embodies the work formerly taught as physical geography and physiology, the list second year, he takes up biology, which takes him still higher into the mystery of animal life. In his third year he has a choice of either chemistry or physics, where the very basic try or physics, where the very basic principles of life and its properties are principles of life and a system which leaves

As to this system, Prof. Jones, who teaches chemistry, and Prof. Elliot in charge of the physics department have taken a departure from the ancient cut. taken a departure from the ancient cut and dried methods of teaching which may appear radical to the old school teacher, but which from its very sensibleness, convinces that it is the proper method. Recitations and tectures have been practically done away with in their place, the student in chemistry and physics, is taken into the laburation of the convergence of the students. As to blology. Starting with the lowest kind of animal life, Prof. Carpenter, counting on the enthusiasm of his classes, is leading his students through a maze of theories and facts positively alluring in the manner in which they are implanted. His department is well equipped, though perhaps not as well equipped as he would like it. This is

"Thou Shalt Not Covet," which as a woman, a new experience for her, and her struggles against her own worse nature and her love, in which she willing to correct the country of the control of the contro

THESE MEN LABOR THAT OTHERS

Up at Phoenix Union High School, in oratory, set to working out an experia building over the door of which appears "Science Hall," is a liftle band of men, who are today and every day inhoring towards a goal. Their labor thysics naturally lends itself to its is labard. Their pay is not the largest in the world. They meet with obstacles denis during the working of their experiments.

ag is the fact that they are obtaining as its fact that they are obtaining as its. These results will benefit the ity of Phoenix, the state of Arizona, and the whole country in no small as under the old system. There are a total of 24 topics to be taken up. Some total of 24 topics to be taken up. Some are of the brighter students accomplish Several hundred boys and girls, are of the brighter students accomplish the whole number, but a minimum for learn to think accurately about passing of 18 is all that is required. passing of 18 is all that is required.

to learn to think accurately about things that are more or less familiar, and are being given a keen insight into the principles of chemistry.

Claude Decatur Jones, Head of the science department of the high school, assisted by Lloyd E. Elliet, W. W. Carpenter, instructor in biology, J. R. Wilborn, and keenly interested in their language in first year science, and H. G. gineering is laid, and when a student gineering is laid and when a student finishes his work for the year, he is el-igible to enter any college in the

The principal aim of the chemistry cousre, according to Prof. Jones, is to lay a foundation for a practical knowledge of the subject. There is such a wide field for a chemist in this country, with every manufactury employing their own chemists, that he believes that any one of his students upon finishing the course is capable of holding down an assistant chemist's position anywher in the country. The chemical laboratory is probably

GOODMAN SAYS: Wheat market will gain headway with the increasing demand from abroad and poore

all subjects.

Taking it all in all, there is no more interesting spot in Phoenix than Science Hall. It should by rights be one of the show places of Phoenix, it would take columns to detail the work being done, and it would take the vocabulary of a Harvard rendessor to explain it.

Possibly the fact that Frot. Jones has 75 chemistry students, who take ten hours each making a total of 750 hours a week, will serve to best explain the amount of work that is being done.

MICHIGAN.

The Michigan University Glee Club will entertain the student body of P. H. S. during the middle of December, at the expense of the Juntor class, Principal Cook, a graduate of Ann Arbor, on learning of the club's western trip immediately communicated with them and brought them here on a \$100 guarantee.
